## SUMMARY

World wool consumption by mid-1966 had staged a year-long recovery, with use during the first 2 quarters of 1966 running well above production levels. This is a reversal of the 3 previous seasons when production exceeded consumption. The general level of Dominion wool prices by July 1966 was 9 percent above mid-1965. Consumption in major manufacturing countries during the first half of 1966 was 11 percent above the same period of 1965 and is expected to continue above year earlier rates. This will likely more than offset the price effect of a slight increase--possibly 1 percent--in world wool production and increased competition from man-made fibers. These factors and international tensions will likely lead to continued strength in world prices during 1966-67.

The United States in 1967 will produce about the same amount of wool as in 1966, but consumption of apparel wool is expected to be smaller. Domestic prices in 1967, however, likely will follow the trend in world prices and average slightly higher than in 1966. Prices received by growers for shorn wool during the first 9 months of 1966 averaged about 9 percent above a year earlier, or approximately 51 cents a pound, grease basis.

U.S. mill consumption of apparel wool in 1967 likely will decline approximately 5 percent from the estimated 285-290 million pounds, scoured basis, for 1966. Higher wool prices relative to man-made fiber prices, even with the high level of domestic demand in the United States, are expected to result in lower apparel wool consumption in 1967. In this connection, mill consumption (seasonally adjusted) and unfilled orders of finished apparel wool fabrics have declined in recent months.

Mill use of apparel wool during January-July 1966 totaled 169 million pounds, scoured basis--9 percent above a year earlier. Wool consumption on the worsted system rose 14 percent; use on the woolen system was up 2 percent. A slightly higher percentage of wools grading 60's and finer was used in 1966. Raw wool's share of total fiber consumption in 1966 increased slightly. Man-made fiber's share also rose. The share of reused, reprocessed, and other wool declined.

The higher level of wool mill activity in 1966 was accompanied by larger imports of semi-processed and manufactured wool textile products. Imports of these products in 1966 likely will total a record high of 90-95 million pounds, raw wool equivalent, compared with the previous high of 83 million pounds in 1965. A small decline in imports of apparel wool textiles during 1967 may result because of the expected decrease in wool mill activity. Imports of all product categories except knit wearing apparel increased in January-August 1966 compared with a year earlier. Imports of woven fabrics--the largest category--increased 9 percent. Imports of tops and advanced wool rose 73 percent; those of wool yarns increased 49 percent.

If mill activity declines as expected, dutiable raw wool imports in 1967 likely will be down around a tenth from the 165-170 million pounds now expected in 1966. During January-August 1966 imports of dutiable wools totaled 124 million pounds--up 15 percent from a year earlier. Quality composition of 1966 imports shifted in favor of more 40's to 46's. This shift likely resulted from proportionally less wools originating in Australia.

Mill use of carpet wool in 1967 is expected to remain stable at the record-low level of 105-110 million pounds, scoured basis, estimated for 1966. Competition from man-made fibers has been important in replacing wool in the carpet and rug market. During January-July 1966, carpet wool use amounted to 62 million pounds, scoured basis--3 percent below a year earlier. Use of man-made fibers increased 7 percent in 1966 and now represents 50 percent of total fiber use.

Imports of duty-free raw wool in 1967 likely will total 105-110 million pounds, clean content. In 1966, imports probably will total 115-120 million pounds. Large imports that would exceed expected consumption, probably are due to the relatively low level of beginning stocks. Imports of duty-free raw wool amounted to 85 million pounds during January-August, 1966--up 17 per cent from a year earlier. New Zealand and Argentina continued to be the largest sources of U.S. supplies of carpet wool, accounting for 46 and 30 percent, respectively, of total imports in 1966. Rug and carpet imports declined in 1966 and totaled 11 million pounds, raw wool equivalent.

Mohair prices in 1966 continued the decline that began in early 1964. The 1966 average price is expected to be near 57 cents a pound, grease basis, down from 65.5 cents in 1965. Increased stocks in 1964-65 likely resulted in the lower prices and will continue to hold prices down in 1967. Production increased during 1966. Exports of U.S. mohair in 1966 also increased, but domestic mill use declined. As a result, the large beginning stocks in 1966 may increase slightly during the year.

# THE DOMESTIC SITUATION

## 1967 WOOL PRICES MAY AVERAGE ABOVE 1966

Prices received by producers for shorn wool in 1967 may average a little above 1966 prices which are high relative to those received in most previous years and relative to prices of competing non-cellulosic fibers. Higher world wool prices and increased mill activity abroad are expected to continue into 1967. World prices may decline later in 1967 depending on world demand conditions. International tensions will continue to support wool prices.

The U.S. national-average price of shorn wool in 1966 is estimated at about 51 cents a pound, grease basis--up about 4 cents from the 47.1 cents received by growers in 1965. Preliminary monthly prices received for greasy shorn wool thru September 1966 ranged from nearly 2 to almost 7 cents a pound higher than a year earlier. This amounted to about a 9 percent increase. (See table 1.)

Prices of graded domestic shorn wool in Boston moved up gradually during the January-July period of 1966. Wool prices were mostly stable in August and declined very slightly in September. From January to August of 1966, prices of graded territory wool, 60's and finer, increased about 9 percent. Prices of the coarser territory wools rose from 2 to 5 percent. Prices of graded fleece Delaine in August were up 9 percent from January; that of fleece 3/8's blood (56's 58's) declined 6 percent from January to August 1966. (See Statistical Summary, Part 1-Prices and fig. 1.)

Table 1.--Average price per pound, grease basis, received by farmers for shorn wool, U.S., by months, 1962-66

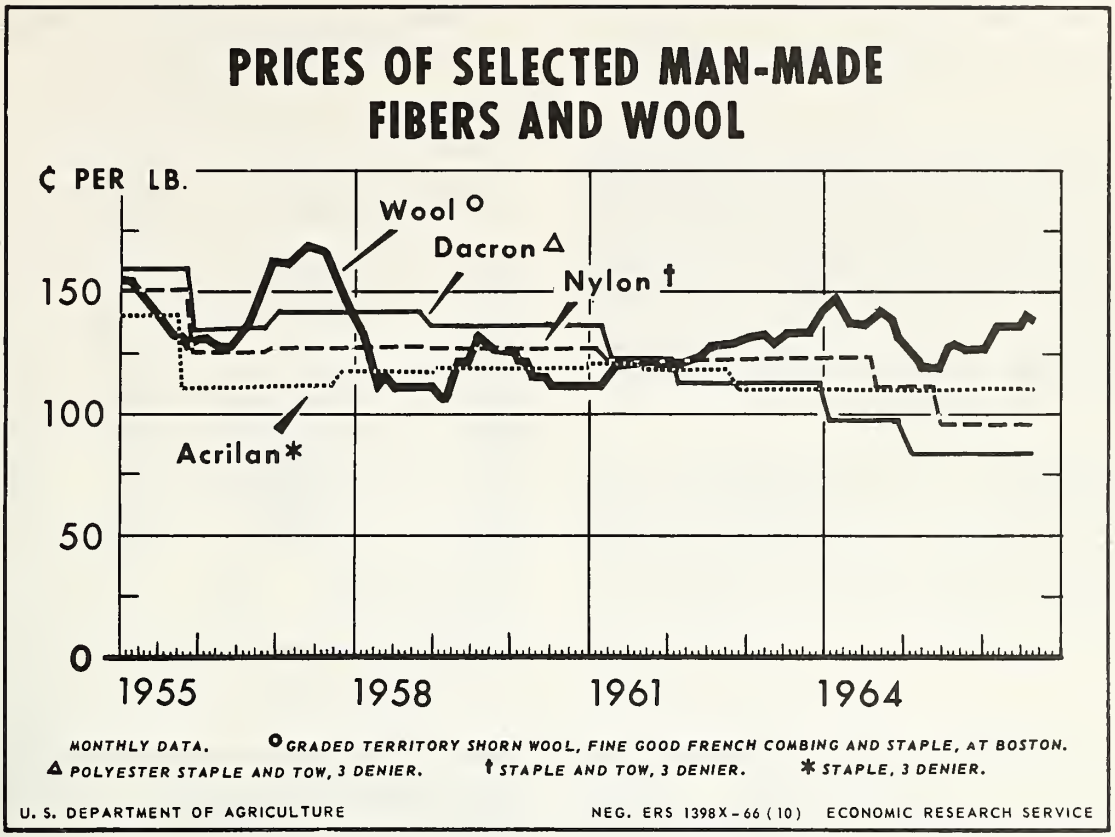

Figure 1

## WOOL PROGRAM HIGHLIGHTS

Nearly 80 percent of U.S. sheep producers voting in the September referendum approved a new agreement between the Secretary of Agriculture and the American Sheep Producers Council, Inc. As in the past, the new agreement authorizes the Secretary to make deductions from producers' wool incentive payments to finance the Council's promotion and advertising of wool and lamb. The new agreement applies to 1966-69 marketings. The maximum rates of deductions were increased to 1 1/2 cents a pound on shorn wool and 7 1/2 cents a hundredweight on unshorn lambs, compared with 1 cent and 5 cents on marketings through 1965.

Incentive payments made to growers on 1965 marketings of shorn wool and unshorn lambs totaled $34 million--up from $20.3 million on 1964 marketings. This difference resulted largely from the decline during 1965 in the national-average price of shorn wool. Marketings on which payments were made declined in 1965.

The incentive price for 1967 shorn wool production is set at 66 cents a pound compared with 65 cents in 1966 and 62 cents in previous years. (See table 14.)

## U.S. WOOL PRODUCTION STABLE IN 1967

Wool production in the United States during 1967 is not expected to be notably different from 1966. Numbers of sheep and lambs on January 1, 1967 may approximate the 26 1/2 million head of a year earlier.

Shorn wool production in 1966 as of July was expected to total 211.2 million pounds, grease basis--down 1 percent from 1965. The 1966 production of shorn wool is equivalent to 100.8 million pounds, clean basis.

## SMALLER APPAREL WOOL USE EXPECTED

Mill use of apparel wool may decline in the coming year, possibly by as much as 5 percent from 1966 due primarily to rising wool prices. Use is estimated at 285-290 million pounds, scoured basis, in 1966. In addition to higher wool prices, man-made fiber production capacity is vastly increased and the rate of apparel wool consumption is currently declining.

The seasonally adjusted rate of apparel wool consumption declined to a weekly average of 5.2 million

pounds during May-July 1966. This rate was some 10 percent below the most recent high of 5.8 million pounds during October 1965 to February 1966. (See table 16 and fig. 2.)

Apparel wool use during January-July 1966 totaled about 169 million pounds, scoured basis--up 9 percent from a year earlier. (See tables 2 and 17.) Raw wool consumption on the worsted system during the first 7 months of 1966 increased 14 percent from a year earlier and amounted to nearly 108 million pounds; use on the woolen system rose 2 percent and totaled over 61 million pounds. The worsted system's share of total apparel wool use in 1966 increased to 64 percent from 61 percent a year earlier. (See table 3.)

Wool grading 60's and finer during January-July 1966 represented over 52 percent of total raw wool use for apparel purposes. This was up from 51 percent in January-July 1965. On the worsted system, a larger share of the 60's and finer wools were used; on the apparel woolen system, more of the wools graded 50's up to 60's. (See table 3.)

Table 2.--U.S. mill consumption of raw wool, scoured basis, January-July 1957 to date

| Year | Apparel wool | Carpet wool | Total |
|---|---|---|---|
| | 1,000 lb. | 1,000 lb. | 1,000 lb. |

| 1965 | 51.3 | 42.3 | 6.4 | 100.0 |
| 1966 | 52.3 | 47.7 | | 100.0 |

Compiled from reports of the Bureau of the Census.

Top production during January-July 1966 totaled about 108 million pounds--up 8 percent compared with a year earlier. Output of all noils amounted to 11 million pounds--10 percent above a year earlier. Raw wool's share in 1966 of all fibers consumed in top production increased to 91 percent from 87 percent in 1965. (See table 17.)

A total of 197 million pounds of all fibers was used during January-July 1966 in the spinning of yarns on the woolen system, except for carpet and rug yarns. This was 2 percent above a year earlier. Use of raw wool amounted to 61 million pounds, scoured basis--an increase of 2 percent. Consumption of reused, reprocessed, and other wool was unchanged at 79 million pounds. Man-made fiber use in January-July 1966 totaled 52 million pounds--6 percent over a year earlier. Consumption of other fibers was up 1 percent in 1966. Man-made fiber's share of the total increased to about 27 percent, replacing some reused, reprocessed, and other wool. Raw wool's share was stable at 31 percent. (See table 17.)

## INVENTORIES AND UNFILLED ORDERS OF WOOL APPAREL FABRICS

Inventories of finished wool apparel fabrics have remained at relatively low levels since late 1964. Although declining moderately during the last year, unfilled orders of finished apparel fabrics have continued since late 1964 at relatively high levels. The relative balance of inventories to unfilled orders of these fabrics is shown in table 4. Low ratio values generally indicate a high level of wool mill activity during future months.

Table 4.--Finished wool apparel fabrics: Ratio of inventories to unfilled orders, by months, 1962 to date

1/ Excluding data for wool-blend fabrics (chiefly polyester).

Compiled from reports of the Bureau of the Census.

Inventories of all finished wool fabrics at the weaving mill level declined seasonally to 23 million linear yards at the end of June 1966--down 2 percent compared with a year earlier. Unfilled orders also declined seasonally and totaled 102 million linear yards at the end of June 1966--down 15 percent compared with June 1965. Woolen fabric inventories at the end of June 1966 were 15 percent below a year earlier--down slightly more than unfilled orders. For worsted fabrics at the end of June 1966, inventories had increased 22 percent and unfilled orders declined 24 percent compared with a year earlier. Inventories of chiefly polyester blend fabrics containing wool were up 32 percent and unfilled orders were down 14 percent.

Gray apparel fabric inventories declined seasonally during the second quarter of 1966 and totaled 20 million linear yards at the end of June. This was down 12 percent from a year earlier and 33 percent below those of June 1964. Inventories of gray fabrics declined during the last half of 1964 and have since remained at low levels. Inventories of both worsted and woolen gray fabric declined in 1966 and at the end of June totaled 4.3 and 15.7 million linear yards, respectively.

## IMPORTS OF APPAREL WOOL TEXTILE PRODUCTS

Imports of semi-processed and manufactured apparel wool textile products in 1966 likely will reach a record high--90-95 million pounds, raw wool equivalent. This estimate would be up about 11 percent from the previous high of 83 million pounds in 1965. If apparel wool mill activity declines as expected in 1967, a slightly lower level of product imports is also likely.

A total of 58 million pounds, raw wool equivalent, of apparel wool textile products was imported during January-August 1966. This was 17 percent above the comparable period of 1965. Imports for all categories except knit wearing apparel were higher than a year earlier. Woven fabric imports during January-August 1966 increased 9 percent over a year earlier and totaled 19 million pounds. Imports of tops and advanced wool nearly doubled. Wool yarn imports were up 49 percent, and imports of knit wearing apparel declined 1 percent. Significant increases also were made in imports of other smaller categories. (See table 18 and fig. 3.)

Imports of wastes during the first 8 months of 1966 amounted to 12 million pounds--up 18 percent compared with a year earlier. Noil imports declined 14 percent and totaled 20 million pounds.

Exports of apparel wool textile products during January-August 1966 totaled about 4 million pounds--down 3 percent from a year earlier. Exports of noils and wastes amounted to 5 million pounds--down 29 percent from a year earlier. (See table 19.)

## IMPORTS OF DUTIABLE RAW WOOL

Imports of dutiable raw wool are expected to decline in 1967 by around a tenth from the 165-170 million pounds, clean content, expected for 1966. Pro-

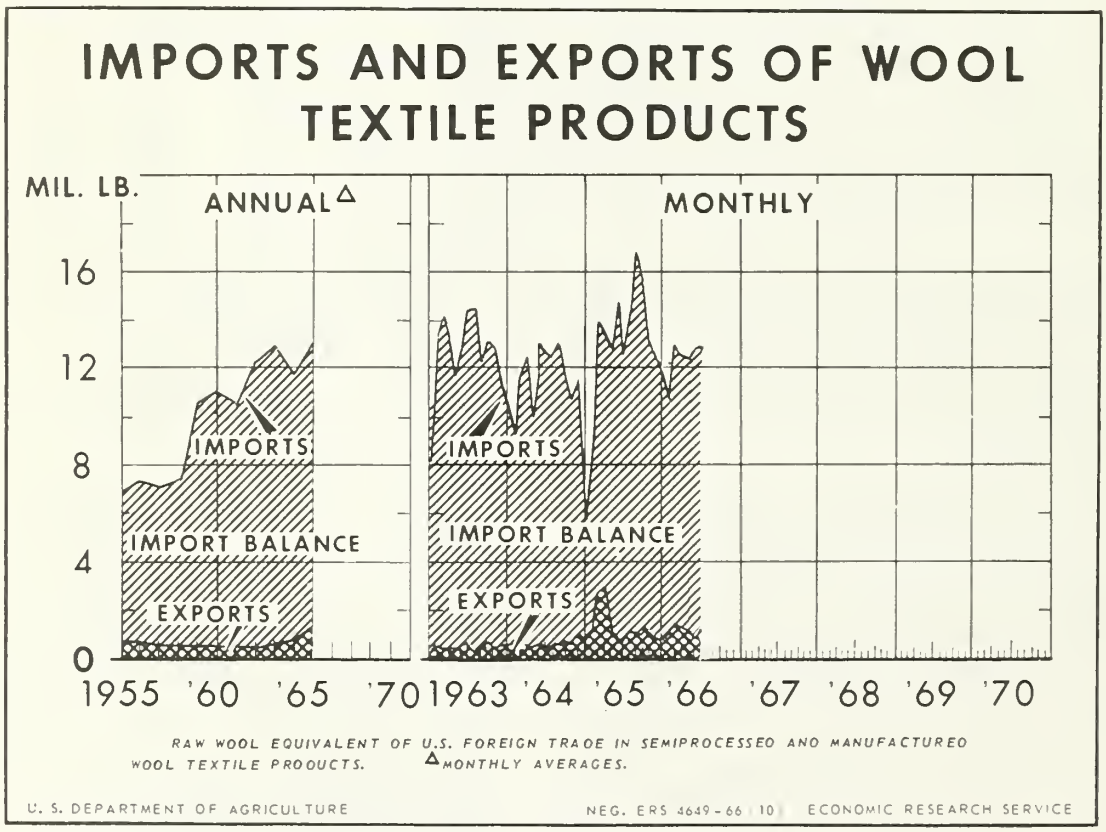

Figure 3

spects for higher wool prices and reduced domestic mill consumption point to smaller imports.

During the first 8 months of 1966, imports amounted to 124 million pounds--15 percent above a year earlier. Lower domestic production, higher mill consumption, and uncertainty about future supplies of desired foreign wools likely contributed to the increase. (See table 5.)

Table 5.--Imports of dutiable and duty-free wool for consumption into the United States, clean content, January-August 1957 to date

| Year | Dutiable | Duty-free | Total |
|---|---|---|---|
| | 1,000 lb. | 1,000 lb. | 1,000 lb. |
| 1957 | 58,752 | 85,327 | 144,079 |
| 1958 | 43,008 | 64,520 | 107,528 |
| 1959 | 72,443 | 138,221 | 210,664 |
| 1960 | 53,535 | 110,023 | 163,558 |
| 1961 | 60,973 | 108,497 | 164,470 |
| 1962 | 82,753 | 89,589 | 172,342 |
| 1963 | 81,922 | 121,254 | 203,175 |
| 1964 | 62,322 | 76,900 | 139,222 |
| 1965 | 107,440 | 72,311 | 179,751 |
| 1966 | 123,824 | 84,721 | 208,545 |

Compiled from reports of the Bureau of the Census.

The 5 major surplus-producing countries of the Southern Hemisphere supplied 94 percent of total dutiable raw wool imports--same as a year earlier. Australia accounted for 39 percent during January-August 1966, down from 43 percent a year earlier. Shares of the total were up slightly for Argentina and New Zealand, and down slightly for South Africa and Uruguay. In 1966, shares of U.S. imports for each of these countries ranged between 13 and 15 percent.

The quality composition of imported dutiable wools was relatively stable in the first 8 months of 1966 compared with a year earlier. Those grading finer than 56's were unchanged at 72 percent of total imports. The only notable change was a relative increase in imports of wools grading 40's to 46's displacing those grading 46's to 56's. (See table 6.)

## WOVEN WOOL FABRIC PRODUCTION INCREASES IN 1966

U.S. production of woolen and worsted woven fabric is expected to total 280-285 million linear yards in 1966--about 6 percent above the 267 million linear yards produced in 1965. Output of finished fabrics for women's and children's wear will account for most of the increase; that of men's and boys' woven apparel fabric will be up slightly. A sharp increase in 1966 is expected in the production of wool blanketing. During 1967 total finished wool fabric production is expected to decline slightly as wool consumption is expected to decrease.

Table 6.--Quality composition of dutiable and duty-free imports, clean content, United States, January-August 1963 to date

| Grade | 1963 | 1964 | 1965 | 1966 1/ |
|---|---|---|---|---|
| | Pct. | Pct. | Pct. | Pct. |
| | Dutiable | | | |
| Finer than 56's | 73.6 | 68.3 | 72.3 | 72.3 |
| 46's to 56's | 13.6 | 10.4 | 15.8 | 13.6 |
| 40's to 46's | 3.9 | 6.8 | 3.4 | 6.1 |
| Not finer than 40's | 8.8 | 14.4 | 8.5 | 8.0 |
| Total | 2/100.0 | 100.0 | 100.0 | 100.0 |
| | Duty-free | | | |
| 44's to 46's | 23.5 | 14.8 | 12.2 | 11.9 |
| 40's to 44's | 16.6 | 16.9 | 24.3 | 34.4 |
| Not finer than 40's | 38.0 | 39.0 | 44.1 | 35.6 |
| Donskoi, Smyrna, etc. | 21.9 | 29.3 | 19.4 | 18.1 |
| Total | 100.0 | 100.0 | 100.0 | 100.0 |

1/ Preliminary.
2/ Includes small amount of carbonized wool for which grade is not reported.

Compiled from reports of the Bureau of the Census.

Output of finished wool fabrics during the first quarter of 1966 totaled 74.5 million linear yards--up 13 percent compared with a year earlier. Apparel fabric production of 70.9 million linear yards in January-March 1966 was 11 percent above a year earlier. Output of men's and boys' wear fabrics in the first quarter of 1966 totaled 26.9 million linear yards--up 9 percent compared with a year earlier; that of women's and children's wear fabrics amounted to 42.2 million linear yards--up 14 percent. Apparel fabric output for government orders was 1.7 million linear yards in the first quarter of 1966 compared with 1.8 a year earlier. (See table 20.)

Production of gray apparel fabrics in 1966 is running moderately above a year earlier. In the first quarter of 1966, output of these fabrics totaled 71.9

million linear yards. This was 11 percent above a year earlier. Gray fabric production in the first 6 months of 1966 amounted to 148.2 million linear yards--8 percent above a year earlier.

Production of all finished broadwoven fabrics during January-March 1966 amounted to 3,451.5 million linear yards--up almost 2 percent compared with a year earlier. Output in the first quarter of 1966 increased 13 and 14 percent, respectively, for wool and man-made fiber goods compared with a year earlier. In contrast, production of cotton broadwoven fabrics in January-March 1966 was 4 percent less that a year earlier. (See table 7.)

Table 7.--Production of woolen and worsted fabric and cotton and man-made fiber broadwoven goods, U.S., annual 1961-65, by quarters, 1963 to date

| Year and quarter | Woolen and worsted | Cotton 1/ | Man-made 1/ | |

1/ Excluding tire fabric. 2/ Preliminary.

Compiled from reports of the Bureau of the Census.

## CARPET WOOL USE EXPECTED STABLE IN 1967

Mill consumption of carpet wool in 1967 may total around the 105-110 million pounds, scoured basis--estimated for 1966. This is about a third below the 1959-63 average of 159 million pounds. (See table 16.)

Carpet wool mill use during January-July 1966 totaled 62 million pounds, scoured basis--down 3 percent compared with a year earlier. (See tables 2 and 17.) However, use of all fibers for carpet and rug yarn spinning totaled 142 million pounds in the first 7 months of 1966--an increase of over 1 percent. Man-made fiber use increased 7 percent and now represents over 50 percent of total fiber use. Raw wool's share in 1966 of total fiber use declined to about 43 percent. (See table 17.)

## IMPORTS OF DUTY-FREE RAW WOOL AND CARPETS AND RUGS

Duty-free raw wool imports in 1967 are expected to be down about a tenth from the 115-120 million pounds estimated for 1966. This would about match expected consumption; imports in 1966 probably will exceed consumption because of low carry-in stocks.

During the first 8 months of 1966, imports of duty-free raw wool totaled 85 million pounds, clean content. This was up 17 percent compared with the same months of a year earlier. (See table 5.)

New Zealand supplied 46 percent of U.S. carpet wool imports during the first 8 months of 1966--about the same as a year earlier. Argentina accounted for 30 percent of U.S. imports in 1966 compared with 27 percent in 1965. The shares of the United Kingdom and Pakistan declined; that of Syria increased.

A significant shift also occurred in the quality composition of imports. More wools grading 40's to 44's and fewer of those grading not finer than 40's were imported. Small decreases were realized in the graded wools of 44's to 46's and in the named unimproved wools of the Middle East and Asia. (See table 6.)

Wool carpet and rug imports during January-August 1966 totaled 11 million raw wool equivalent pounds--down 23 percent from a year earlier. Exports of carpets and rugs declined, but are not of substantial volume. (See table 18.)

# THE MOHAIR SITUATION

The 1966 mohair season is marked by lower prices. This continued the declining price trend that began in early 1964 when both domestic and export demand for U.S. mohair dropped to unusually low levels. Large stocks--accumulated during 1964-65--resulted in lower prices during 1966. Although exports increased during 1966, stocks will continue large and likely keep prices low during 1967. Production in 1966 increased and U.S. mill consumption declined.

Prices received by growers for mohair in 1966 likely will average approximately 57 cents a pound, grease basis. This is down sharply from the national-average price of 65.5 cents in 1965 and 94.3 cents in 1964.

U.S. mohair production has expanded sharply since the early 1950's. Production in 1965 totaled 32.5 million pounds, grease basis, compared with 12.2 million pounds in 1952. The 1965 production was equivalent to about 26.6 million pounds, clean content. Production in 1966 is expected to increase since goat numbers on January 1, 1966 were 9 percent above a year earlier.

U.S. mill consumption of mohair during the first 7 months of 1966 declined from a year earlier. Exports during 1966 may amount to approximately 9 1/2 million pounds, clean content, compared with 7.7 million pounds in 1965. Exports to the United Kingdom--the largest foreign buyer of U.S. mohair--nearly doubled in 1966 compared with a year earlier. Domestic mill use and exports combined in 1966 will likely be less than production and result in even larger stocks.

Mohair producers received incentive payments for the second time in the history of the National Wool Act of 1954. These payments on 1965 marketings amounted to $1.9 million. The incentive price for mohair on 1966 marketings is 76.4 cents a pound compared with 75.8 in 1965.

# THE WORLD WOOL SITUATION

## WORLD WOOL PRICES EXPECTED TO INCREASE

Stronger world wool prices in the 1966-67 season are in prospect in view of a relatively low level of production, a high consumption rate, and declining stocks. However, price gains may be small as the competitive position of man-made fibers strengthens. Other factors likely to moderate any rise in wool prices include an anticipated leveling in the rate of world wool consumption.

The world wool season just ended was marked by gradual but persistent price increases. By July 1966, the average price of all Dominion combing wools had risen moderately--9 percent--over a year earlier. (See table 21 and fig. 4.) World production of wool in 1965-66 had declined less than 1 percent from a year earlier After 3 years at slightly lower than production levels, estimated world wool consumption in 1965 recovered and is now running well above production. Stocks of wool in October 1966 were down substantially from a year ago. In the 1966-67 season, production is estimated to be 1 percent above a year earlier and consumption is expected to continue at relatively high levels.

Opening sales of the 1966-67 season in the Southern Hemisphere saw prices mixed, but averaging down 2 percent from closing sales of the previous season. This is likely an adjustment related to the faulty character of drought-affected wool rather than the beginning of a downward trend in prices.

World price increases from July 1965 to June 1966 were nearly equal--averaging 15 percent higher--for all wool of grades 56's and finer. Prices of the coarser wools, however, were mixed but declined an average of about 4 percent during the 1965-66 season. These price movements likely reflect the higher consumption in the worsted sector relative to that of woolen sector.

## WORLD WOOL PRODUCTION UP SLIGHTLY

World production of wool in the 1966-67 season likely will total only slightly--about 1 percent--above the previous year. On a clean wool equivalent basis, production in 1966-67 is estimated at 3,275 million pounds. Although up slightly, this production would be 2 percent below the record-high in 1963-64. (See tables 8 and 22.)

Production of apparel class wools in 1966-67 are expected to total about the same as the 2,639 million pounds, clean content, of a year earlier. Of these, the merino types are expected to decline slightly while the crossbreds are estimated nearly 2 percent larger. Estimated production of other types (carpet, unimproved, etc.) in 1966-67 is around 2 percent above the previous year. (See table 22.)

Production of wool in non-Communist countries during 1966-67 is expected to be up only slightly. Of these countries, the most notable changes in expected wool output are increases of 5 and 2 percent,

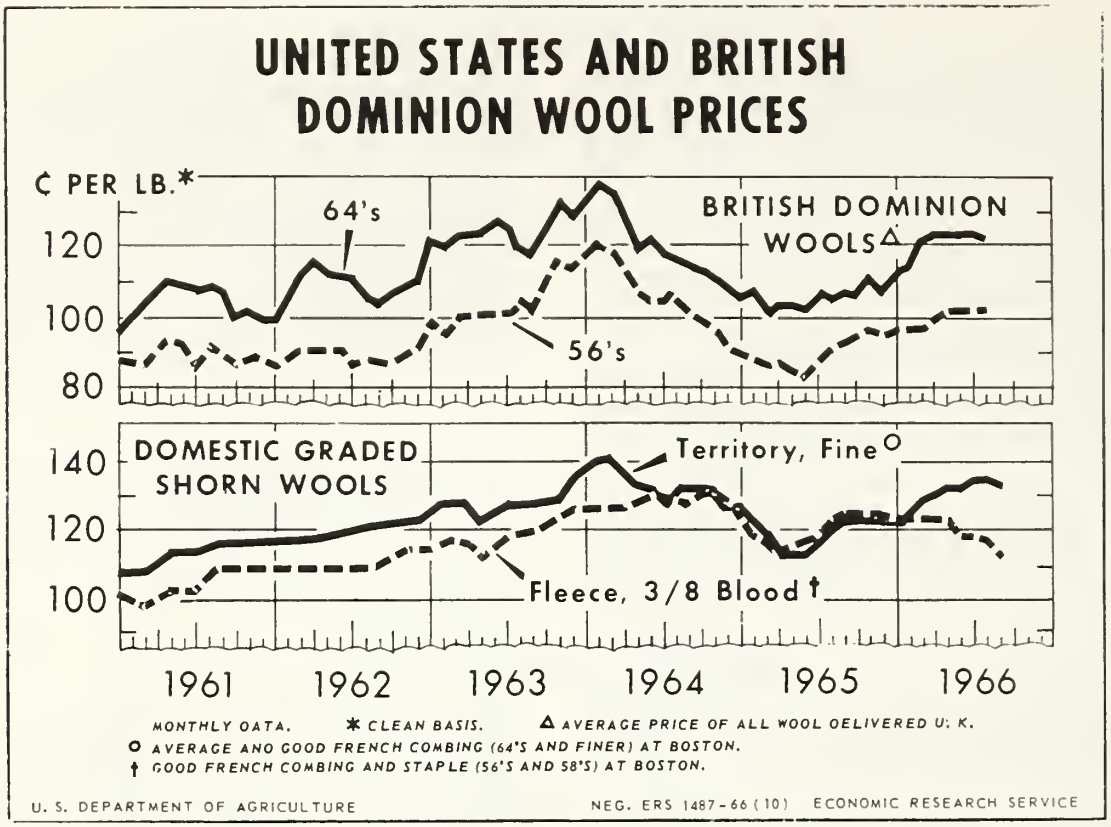

Figure 4

respectively, in New Zealand and Argentina, and a decline of 5 percent in the Republic of South Africa. Wool production during 1966-67 in the Soviet Union, China and Eastern Europe likely will increase over 1 percent, compared with a year earlier. (See table 22.)

## WORLD WOOL CONSUMPTION LIKELY TO BE UP IN 1966

World consumption of raw wool for 1966 is estimated to total 3,350 million pounds, clean basis--up 3 percent from 1965. (See table 8.) During the first half of 1966, the rate of raw wool consumption in major manufacturing countries was increasing and totaled 11 percent above a year earlier, the same rate as for all fibers used in the wool industry. Raw wool's share of the total of all fibers consumed in the wool industry held stable at about 53 percent while that of man-made fibers increased slightly to 22 percent. Consumption of reused wool and other non-wool fibers declined to 25 percent of the total.

Second quarter 1966 wool consumption in 6 countries ranged from 1 to 34 percent higher compared with a year earlier. Wool use in Italy recovered from a low level and made the largest increase. Consumption in the United States was up 1 percent. In the Netherlands and Belgium,

Table 8.--Estimated world consumption and production of raw wool, clean content, annual 1957 to date

| Year | Consumption 1/ | Production 2/ |
|---|---|---|
| | Mil. lb. | Mil. lb. |
| 1957 | 2,952 | 2,889 |
| 1958 | 2,757 | 3,051 |
| 1959 | 3,172 | 3,220 |
| 1960 | 3,310 | 3,225 |
| 1961 | 3,332 | 3,270 |
| 1962 | 3,318 | 3,263 |
| 1963 | 3,323 | 3,336 |
| 1964 | 3,235 | 3,270 |
| 1965 | 3,246 | 3,252 |
| 1966 3/ | 3,350 | 3,275 |

1/ Calendar year. 2/ Marketing year. 3/ Estimated.

Compiled from reports of the Commonwealth Economic Committee.

wool use increased 8 and 9 percent, respectively. Wool use in Japan increased over 14 percent in the second quarter of 1966, compared with same quarter of 1965. Consumption in France was up 13 percent. Wool use continued low in the United Kingdom and during April-June 1966 was slightly below a year earlier. Wool use in West Germany and Australia declined 2 and 7 percent, respectively. (See table 23.)

PRODUCTION OF WOOL TEXTILE PRODUCTS

World output of tops and yarns increased moderately during the first half of 1966 compared with a year earlier while that of woven fabrics declined. Smaller changes of mixed direction in production occurred between first and second quarters of 1966. (See table 24.)

Production of wool and hair tops totaled 680 million pounds during the first half of 1966--up 13 percent from a year earlier. Of the 10 countries reporting, output increased in 7--ranging from 1 percent in West Germany to 95 percent in Uruguay. Decreases in the other 3 countries ranged from 2 to 11 percent. Between the first and second quarters of 1966, total production in the 10 countries rose about 2 percent.

Wool yarn production for worsteds and woolens in 8 countries during the first half of 1966 increased 15 and 2 percent, respectively, compared with a year earlier. Increases in worsted yarn output took place in 7 of the 8 countries and ranged from 1 percent higher in the United Kingdom to 34 percent higher in Italy. Output in Australia declined 17 percent. Worsted yarn output in the 8 countries declined over 1 percent between the first and second quarters of 1966. Woolen yarn output increased over 3 percent between the first 2 quarters of 1966. Compared with a year earlier, production of woolen yarn during the first half of 1966 was up 2 percent. Production in Italy, Belgium and France increased 10, 17 and 5 percent, respectively. Decreases in output of the other 5 countries ranged from 1 percent in Japan to 9 percent in West Germany.

Production of wool woven fabrics in 8 countries during the first 6 months of 1966 declined 7 percent from a year earlier. Production declined 4 percent in the United Kingdom and 12 percent in Australia. Increases in 6 countries ranged from 2 percent in the United States to 40 percent in Italy. Total output of the 8 countries declined 2 percent between the first 2 quarters of 1966 (See table 24.)

EXPANDED WORLD TRADE IN RAW WOOL AND WOOL PRODUCTS

World trade in raw wool and wool products made substantial gains during 1965 and early 1966. Improved trading conditions in South America and increased demand for raw wool in major manufacturing countries resulted in larger exports of raw wool from the 5 surplus-producing countries of the Southern Hemisphere. The increased demand for raw wool and wool products, generally, was reflected in the increased trade in semi-processed and manufactured wool products.

Exports of raw wool during 1965-66 from major exporting countries of the Southern Hemisphere increased 8 percent compared with a year earlier. (See table 9 ) Although Australia exported 1 percent less than a year earlier, exports from each of the other 4 countries were larger. Increases ranged from 9 percent in Uruguay to 36 percent in Argentina. As a result of the larger exports and decline in production in 1965-66, current stocks of raw wool in these Southern Hemisphere countries are below a year earlier.

Table 9.--Exports of wool, actual weight, from Southern Hemisphere surplus-producing countries, 1963-64, 1964-65, and 1965-66 seasons through June 1/

| Exporting countries | 1963-64 | 1964-65 | 1965-66 |
|---|---|---|---|
| | Mil. lb. | Mil. lb. | Mil. lb. |
| Australia | 1,471 | 1,424 | 1,414 |
| New Zealand | 564 | 523 | 611 |
| Republic of South Africa | 255 | 244 | 282 |
| Argentina | 190 | 218 | 297 |
| Uruguay | 49 | 102 | 111 |

1/ Season beginning July 1 in Australia, New Zealand, and Republic of South Africa, and beginning October 1, in Argentina and Uruguay.

Compiled from reports of the Commonwealth Economic Committee.

Exports of wool tops from 10 countries have been increasing since late 1965. During the first quarter of 1966 exports rose 17 percent compared with a year earlier. Between the first and second quarters of 1966, exports are estimated to have increased further. By largest exporting country, increases in first quarter 1966 compared with a year earlier ranged from 3 percent in the United Kingdom to 124 percent in Uruguay. Those of Belgium declined 6 percent. (See table 25.)

Imports of wool tops durning January-March 1966 totaled about 52 million pounds in 16 countries. This amounted to a 9 percent increase over October-December 1965 and a 25 percent increase compared with a year earlier. Those of Belgium, the Netherlands and Italy

increased 34, 50, and 5 percent, respectively, during the first quarter of 1966 compared with a year earlier. West Germany's imports of tops during January-March 1966 declined less than 2 percent compared with a year earlier. (See table 25.)

Yarn exports from 9 countries during the first quarter of 1966 were 13 percent above a year earlier. Those of France and Japan rose 8 and 68 percent, respectively. Yarn exports of the United Kingdom declined 5 percent in the first quarter of 1966 compared with a year earlier. Yarn exports, however, declined for all countries in the first quarter of 1966 compared with the fourth quarter of 1965. (See table 25.)

Imports of yarns of 12 countries increased sharply during January-March 1966 compared with a year earlier. Imports of West Germany--the largest importer of yarns--rose 8 percent. Those of the Netherlands increased 31 percent. Between October-December 1965 and January-March 1966, imports of yarns declined in line with the reduced trade in exports. (See table 25.)

Exports of wool fabrics in the first quarter of 1966 rose sharply compared with a year earlier. Increases ranged from 3 to 24 percent for the most important reporting countries. (See table 25.)

# WOOL-BLEND FABRIC PRODUCTION

## By Larry B. Clayton*

Production of all blended fabrics increased sharply from 1958 to 1965. Production of all broadwoven fabrics in the textile industry also rose, but at a much slower rate. As a result, blends now account for a larger share of total fabric production. Production of wool and cotton fabrics between 1958 and 1965 was relatively stable, compared with the substantial growth in the output of man-made fiber goods. Production of blends of each fiber class increased and now account for larger proportions of the totals.

This article is based on Bureau of the Census reports. Survey coverage for wool blend fabrics ranged between 82 and 90 percent of total wool fabric production. Coverage of cotton fabric production was nearly complete, while that of man-made fiber goods varied from 93 to 96 percent. No estimates were made for nonresponse cases, and as indicated the total production of blends may be understated.

The totals for wool fabrics in table 11 are not completely consistent with those in tables 12 and 13. This results primarily from collection of data by the classification of blends of 50 percent wool and 50 percent of one other fiber. Production of these ranged from a high of 5.8 million linear yards in 1958 to a low of 1.6 million in 1962. There were none reported for 1965. The classification of these 50-50 blends affect the totals of blended fabric production and are shown in table 10.

Production of all blended fabrics more than doubled during the 8-year period studied. In 1965, output of these fabrics totaled over 2.4 billion linear yards. Total fabric production increased only 15 percent from 1958 to 1965 and as a result blend's share of total broadwoven fabric production increased from 9 percent in 1958 to about 18 percent in 1965. The most pronounced trend was in those fabrics of predominately man-made fibers. Production of these blends increased nearly 1 1/2 times and their share of total man-made fiber goods output rose from 32 percent in 1958 to about 46 percent in 1965. Of the total wool fabric yardage, wool-blend's share rose sharply from a range of 18 to 21 percent in 1958, 1960 and 1962 to about 26 percent in 1965. Wool blend production increased about 22 percent from 1958 to 1965. Production of cotton blends has increased, but makes up a substantially smaller part of total cotton fabric production than do the blends of the other fabrics. The share of total going to blends in cotton, however, has been gradually increasing--from 3 percent of the total in 1958 to 6 percent in 1965 Total production of wool fabrics was down about 1 percent in 1965 compared with 1958; that of cotton fabrics rose 3 percent. In contrast, production of man-made fiber goods increased 65 percent from 1958 to 1965 (See table 11.)

Production of all broadwoven fabrics containing wool and at least one other fiber increased sharply between 1958 and 1965. In 1965, output of these fabrics totaled about 119 million linear yards. This includes over 70 million linear yards of principally wool fabrics and nearly 49 million yards of principally man-made fiber broadwoven fabrics. Except for the years between 1962 to 1965, most of the growth in output of blends containing wool was due to the expanded production of fabrics of principally man-made fiber. Production of blended fabrics, principally wool, was relatively stable over the years 1958-62, but increased nearly 14 million linear yards, or 24 percent from 1962 to 1965 (See table 12.)

Most of the increase in output of blends containing wool is due to the increased production of the polyester-wool combination. Wool-nylon blends have continued as the leading combination of the predominately wool blends. Production of wool and other fiber blends, however, has increased rather sharply and totaled between 23 and 26 million linear yards in 1965. About two-thirds of this amount is estimated as blends of an unspecified secondary fiber and one-third of blends of 3 or more fibers. (See table 12.)

Data on predominately wool-blends show that those containing 80-89 percent wool are most popular In 1965 they accounted for 40 percent of the total Most growth, however, has occurred in blends of 90 percent or more wool. Blends of from 50-79 percent wool showed little change between 1958 and 1965. Wool fabrics of less than 50 percent wool contain at least 3 different fibers but have not achieved significant volume. (See table 13.)

There are several possible explanations for the increasing amount of blend fabrics containing wool. Prices of the most important fibers blended with wool --nylon and polyesters--declined in recent years to levels below prices of wool. In addition, the percent of waste of raw wool runs substantially higher than that of the non-cellulosic fibers. These 2 factors of raw materials give the blending of other fibers with wool a cost advantage over all-wool fabrics. In many fabric constructions a pound of blends yields more

---

yardage than 100 percent wool due to higher covering and strength characteristics. This further adds to the cost advantage of blends.

Retail prices of wool-blend apparel often are lower than for all-wool apparel. Blending of fibers usually sacrifices some of wool's most desirable properties--drape, hand, color, etc. However, lower prices and certain new desirable properties of blending--light weight, launderability etc.--likely explain most of the growth in blended fabrics. Finally, product differentiation through promotion and advertising increases the demand for apparel items and has been a particularly important factor in the expanding market for blends.

The Wool Situation is published in March, May, August, and October.

The next issue is scheduled for release March 1967.

# FIBERS USED IN TEXTILES DELIVERED TO THE MILITARY FORCES

by

Charles H. Wittmann and James R. Donald*

Beginning with this issue of the Cotton Situation, data will be regularly published on monthly deliveries of textile products to the military forces.

In this article, data are presented on a monthly basis for the period January 1961 through July 1966.1/ Data included represent fabrics delivered to the military, plus such household articles as sheets, pillowcases, blankets, towels, mattress covers, etc.

Finished items such as apparel, tents and tarpaulins, bags, and parachutes are not included in this analysis. Work is underway to determine the amount of fibers contained in these items. When available these data will be included in later reports. These items will represent contractor-furnished fabrics only, to avoid duplication in reporting data on Government-furnished fabric which are already included in the military-use data. However, it is believed that contractor-furnished fabric for the above items--apparel, etc.--represent only 10 to 15 percent of the fiber equivalent of all textile items delivered to the Military Forces.

## DERIVATION AND PRESENTATION OF TEXTILE DELIVERY DATA

In deriving the fiber poundage data presented in table b, conversion factors were developed for each item reported to have been delivered for use by the military forces. The conversion factor for each item takes into account the weight, width, fiber content (by percent of each fiber in blend fabrics) of the basic fabric construction involved. Also, the following waste allowances for manufacturing the various fiber fabrics were used in developing the conversion factors: cotton 12 percent, wool 5 percent, man-made fiber filament yarn 1.5 percent, and man-made staple fiber 4 percent.

Individual fabric tables, in equivalent square yards, were developed to represent 100 percent cotton, wool, and man-made fiber fabrics, and fabric mixtures.

While broadwoven fabrics are predominant in military uses of textiles, knit fabrics and narrow fabrics (such as webbing) also are used. When reported, these items were included, but are shown separately.

## CHANGES IN USE OF TEXTILES

The total raw fiber content of deliveries in 1966 (projected for the year on the basis of data for 7 months) is estimated at about 76 million pounds of fiber. This is about 25 percent higher than the 1965 level and about 20 percent above the early 1960's. In July 1966, deliveries jumped sharply and were the highest since the beginning of monthly data in 1961. Military uses have generally averaged about 1 percent of total mill consumption of fibers. (See table a.)

Of the individual fibers, cotton accounts for the major proportion of total military use. However, cotton's percentage of the total has declined slightly since the early 1960's--from 84 percent of the total in 1961 to about 78 percent in 1965. Man-made fibers' share of the total increased from 3 percent in 1961 to 9 percent in 1965, while wool's share (about 13 percent) showed little change.

## IMPORTANCE OF INDIVIDUAL FABRIC CONSTRUCTIONS

Military use of cotton fabrics totals about 40 constructions, of which the 25 major ones are shown. Of these, ducks, poplins, twills, sateens, and sheetings are predominant, accounting for about 87 percent of total cotton fabric used in 1965. The important wool fabrics are meltons, serges, and blanketings, accounting for 93 percent in 1965. Netting and parachute fabrics accounted for 82 percent of total man-made fabric use in 1965. (See tables c and d.)

The mixed fiber or blended fabrics group was classified according to type of fiber. Use of cotton and non-cellulosic fiber blends predominated (48 percent), with wool and non-cellulosic blends next (35 percent). Cotton and non-cellulosic blends have increased in recent years. For individual constructions, poplins, sateens, twills, woolens, and tropicals were the most important.

1/ Quarterly data for the third quarter of 1954 through the second quarter of 1961 were developed by Frank Lowenstein, formerly with the Economic Research Service, and now with the Staff Economists Group, USDA, and are contained in the November 1957 and September 1961 issues of the Cotton Situation, although these two series are not strictly comparable.

(Reprint from Cotton Situation, September 1966)

## FUTURE AVAILABILITY OF DATA

The project of converting military uses of textiles to square yards and to equivalent pounds of raw fiber is being programmed for automatic data processing. In future months, details giving conversion factors, information about coated fabrics, and data regarding fiber blends will be maintained on file for the approximately 2,000 items used by the military forces.

1/ Year beginning April 1 for 1955 through 1962 marketing years, 9-month period beginning April 1 for 1963 marketing year, and calendar year for 1964 and thereafter.

2/ Unadjusted for weight of unshorn lambs purchased.

3/ Average price per pound received by growers for wool sold during the marketing year.

4/ U.S. average price per pound computed by weighting State average prices by production. Averages for 1955 and 1956 are calendar years; averages for 1957 and later years are for the marketing year.

5/ Percentage needed to bring the average return per pound up to the incentive or support level.

6/ Per hundred weight of unshorn lambs sold.

7/ Payments made after the close of the marketing year. Preliminary estimate for 1965 marketing year.

8/ The National Wool Act of 1954, as amended, limits the accumulated total of payments under the Act on any date to 70 percent of the accumulated total, as of the same date, of gross receipts from specific and ad valorem duties on wool and wool manufactures on and after January 1, 1953. The accumulated reserve as of January 1, 1955, was 92.7 million dollars.

Farmer Programs Division, Agricultural Stabilization and Conservation Service.

Table 15.--Total domestic consumption of wool, United States, average 1951-55 and 1956-60, annual 1961-65, by months, January 1965 to date

1/ Consumption on the worsted system is taken as the sum of top and noil combed. 2/ Includes mohair, alpaca, vicuna, and other specialty fibers as well as tops and noils consumed in woolen spinning and mohair consumed in worsted combing. 3/ Not reported to avoid disclosure of individual company information. 4/ Does not include mohair consumed. 5/ Does not include man-made fiber converted from tow without combing. 6/ Excludes small quantity of man-made fiber noils. 7/ Includes cotton, jute, and other vegetable fibers and animal fibers, other than raw wool and mohair, consumed in worsted combing. 8/ Preliminary.

Compiled from reports of the Bureau of the Census.

1/ Preliminary.
2/ Consumption on the woolen and worsted systems only. Wool is considered as consumed on the woolen system when laid in mixes; consumption on the worsted system is taken as the sum of top and noil combined.
3/ Fabrics wholly or chiefly by weight of wool, reused wool, reprocessed wool or other animal fibers.

Compiled from reports of the Bureau of the Census.

1/ Production in 7 leading States (Arizona, California, Missouri, New Mexico, Oregon, Texas, and Utah).

2/ Production as reported converted on basis of 82 percent yield, the yield factor adopted by the Bureau of the Census to convert stocks reported greasy to a scoured basis.

3/ Includes mohair held on consignment, foreign mohair held in bond, and mohair in process of manufacture up to the carding operation but excludes mohair held for the account of or by growers.

4/ Includes only mohair not advanced in any manner or by any process of manufacture beyond washed, scoured or carbonized condition.

5/ Includes mohair and other wool like specialty hair.

6/ Not available. Bureau of the Census reports show only combined figure for mohair, alpaca, vicuna, etc., on woolen system.

7/ Weighted average.

Data on stocks, imports, exports, and consumption compiled from reports of the Bureau of the Census; Boston market prices compiled from Weekly Review of the Boston Wool Market (USDA). Production data from Crop Reporting Board, SRS.

LIST OF TABLES

| Table | Title | Page |
|---|---|---|
| | Wool Situation at a Glance | 2 |
| | Statistical Summary Part I-Prices | 29 |
| | Statistical Summary Part II-Mill Consumption and Imports | 30 |
| | Annual Statistical Summary Part I-Prices | 41 |
| | Annual Statistical Summary Part II-Supplies | 42 |
| | Annual Statistical Summary Part III-Mill Activity | 43 |
| | Annual Statistical Summary for Mohair | 44 |
| 1 | Average price per pound, grease basis, received by farmers for shorn wool, U.S., by months, 1962-66 | 4 |
| 2 | U.S. mill consumption of raw wool, scoured basis, January-July 1957 to date | 6 |
| 3 | Percentage distribution of apparel wool consumption, by system and grades, January-July 1962 to date | 7 |
| 4 | Finished wool apparel fabrics: Ratio of inventories to unfilled orders by months, 1962 to date | 7 |
| 5 | Imports of dutiable and duty-free wool for consumption into the United States, clean content, January-August 1957 to date | 9 |
| 6 | Quality composition of dutiable and duty-free imports, clean content, United States, January-August 1963 to date | 9 |
| 7 | Production of woolen and worsted fabric and cotton and man-made fiber broadwoven goods, U.S., annual 1961-65, by quarters, 1963 to date | 10 |
| 8 | Estimated world consumption and production of raw wool, clean content, annual 1957 to date | 12 |
| 9 | Exports of wool, actual weight, from Southern Hemisphere surplus-producing countries, 1963-64, 1964-65, and 1965-66 seasons through June | 13 |
| 10 | Production and classification of selected 50-50 blend fabrics | 17 |
| 11 | Production of broadwoven fabrics, selected years | 17 |
| 12 | Production of selected blended fabrics, by principal fiber and secondary fibers, selected years | 18 |
| 13 | Broadwoven fabric production, wool blends and mixtures, principally wool, by percent of wool, selected years | 18 |
| 14 | Marketings covered by and payments under the National Wool Act of 1954 | 31 |
| 15 | Total domestic consumption of wool, United States, average 1951-55 and 1956-60, annual 1961-65, by months, January 1965 to date | 32 |
| 16 | Average weekly rate of consumption of apparel and carpet wool on woolen and worsted systems, scoured basis, United States, by months, unadjusted and adjusted for seasonal variation, 1962 to date | 33 |
| 17 | Fibers consumed and percentage distribution of wool and other fibers used in woolen spinning and worsted combing, United States, January-July 1962-66 | 34 |
| 18 | Raw wool content of United States imports for consumption of wool manufactures, annual 1961-65 and by months, January-August 1966 | 35 |
| 19 | Raw wool content of United States exports of domestic wool manufactures, annual 1961-65 and by months, January-August 1966 | 35 |
| 20 | Production of woolen and worsted woven goods, by type of fabric, United States, annual 1963-65, by quarters, January-March 1965 to date | 36 |
| 21 | Price per pound of British Dominion wool, (Bradford grade), by months, January 1963 to date | 37 |
| 22 | Estimated world production of raw wool, 1962-63 to 1966-67 | 38 |
| 23 | Estimated consumption of wool in selected manufacturing countries, clean content, annual 1963-65, and April-June 1965 and 1966 | 38 |
| 24 | Production of wool and hair tops, woolen and worsted yarn, and wool woven fabrics, by specified countries, annual 1963-65, by quarters, January-March 1965 to date | 39 |
| 25 | World trade in wool tops, woolen and worsted yarn, and exports of woolen and worsted fabric, by specified countries, annual 1963-65, by quarters, October-December 1964 to date | 40 |
